

Vibratory Equipment for the **FOOD INDUSTRY**

Focus On Industry

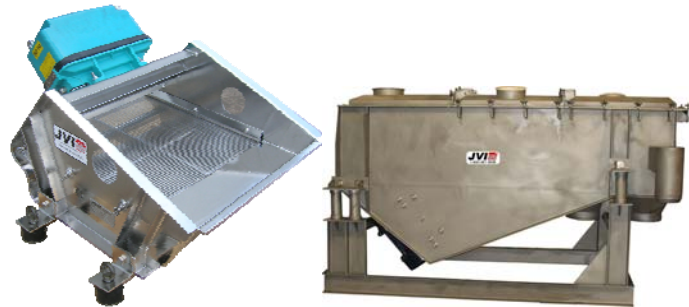

Vibratory Equipment for Food Processing

JVI manufactures equipment for feeding, dosing, batching, elevating and screening of dry bulk materials in the food processing industry. JVI equipment is engineered to meet the application requirements and is designed using JVI's proven industry standards.

Dosing Feeders with or Without a Hopper

Screens for classifying and separation

Pan Feeders

Enclosed Tube Conveyors

JVI Feeders have highly accurate batching capabilities.

Spiral Elevators for gentle vertical conveying

The micro-throw motion of JVI vibratory equipment is gentle on even the most friable food industry products. Providing feeders with reliable and accurate feed rates and excellent repeatability is our promise to you. JVI feeders and controls out class the competition when it comes to reliability, adjustability and durability. JVI manufactures vibratory equipment for the food industry that is designed to the specific application requirements and our testing facility in Houston, Texas will ensure that feeders meet precise batching requirements.
